

# The Power Turn Mattress System

The Power-Turn™ Elite Mattress System combines two clinically effective therapies: Lateral Rotation and True Low Air Loss in a portable system. Lateral Rotation Therapy reduces the risk of pulmonary complications for patients who are immobile. A Full, a Left or a Right Turn mode is offered with either a 25° Small Turn or a 40° Big Turn. The mattress replacement is designed to fit all standard hospital beds and includes a high density foam base, head bolster, and abduction wedge for additional patient safety.

Ventilated low air loss cells have air holes throughout the mattress to help minimize skin maceration by reducing excess moisture under the patient.

The blower pump is controlled by a micro-processor which allows the caregiver total control of comfort. Cycle time ranges from 5 to 95 minutes. The blower pump inflates the mattress within minutes. This reduces the waiting time for therapeutic treatment to begin.
