Low Bed LTC
Bed Frame

The FHS-1550 Pro Elite Alternating Pressure Mattress System incorporates a Low Air Loss Therapy mattress cover. While the Alternating Pressure cells transfer pressure away from the skin reducing pressure ulcers the Low Air Loss Therapy transfers moisture away from the patient's skin which maintains the optimal micro-climate. This is a low shear, low friction nylon cover fabric that is washable, anti-microbial, fluid resistant. This cover is loose fitting and will conform to the patient.

Patient Sensing Technology (PST)

Patient Sensing Technology (PST) measures the patient and automatically adjusts pressures to create the patient's optimal therapeutic surface. The mattress will also auto adjust pressures for the fowler position to ensure that the patient is supported appropriately.

Mattress Specifications

- 36"x 80" = 650lb capacity
- 42"x 80" = 750lb capacity
- 48"x 80" = 1000lb capacity
